Ephemerides k. 7 5 b. b. 25

Merlinus Liberatus.

BEING AN

ALMANACK

For the Year of our Redemption,

1789,

Being the Firſt after *Biſſextile*, or *Leap Year*;
And from the Creation of the World, according to the beſt Hiſtory, 5736,

And the 100th of our Deliverance by *K. William*, *From Popery and Arbitrary Government*;
But the 94th from the

Horrid, Popiſh, High-Church, Jacobite Plot.

Wherein are contained all Things fitting and uſeful for ſuch a Work; as an Ephemeris of the daily Motions of the Planets, with their various Configurations, Aſpects, Conjunctions, Lunations, Eclipſes, Aſtronomical, Aſtrological, Meteorological Obſervations, the Riſing and Setting of the Sun, Moon, Planets, and fixed Stars, illuſtrated with Tables of the Tides, Terms, and daily Equation of [illegible]th and Break, Increaſe and Decreaſe of Days, Semidiurnal and Semi-nocturnal Arches for ſeveral Latitudes, a Chronology, Remarkable Diviſions of the Heavens, with Judgments of the Eclipſes [illegible], handled according to the Rules of the Ptolomean [illegible], with many other Things relating to the Truth of Aſtrology. And will equally ſerve alſo for either *Parker*'s or *Saunders*'s Almanack, as it contains moſt of the uſeful Parts of thoſe other two Works, and *White*'s Ephemeris contains the reſt.

Calculated for the Meridian of LONDON.

By **JOHN PARTRIDGE.**

——— *Etiam Mortuus loquitur.*

LONDON.
Printed for the **Company of STATIONERS;**
And Sold by *Robert Horsfield*, at their Hall, in *Ludgate Street*.

[Price ſtitched Nine Pence.]

A Table of the Common Notes, and Moveable Feasts, for the Year of our Lord 1789.

A Table of the Moon's Age for every Day throughout the Year 1789. whereby, with the Help of the next General Tide Table, the Time of High Water at all the Places mentioned above it, are shewn by Inspection.

An Explanation of this and the following Tables:

First find the Month on the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Column is the Time of High Water at all the Places above mentioned, by Inspection.—*Example, Jan.* 2d I find the Moon to be 7 Days old, and over against 7 in the 1st Column I find 8 h. 36 m. in the 2d Column 7 h. 6 m. in the 3d; which are the Times of High Water at all those Places mentioned above in the 2d and 3d Columns. *Et sic de cæteris.*

Month Day.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.

An Explanation of this and the following Table: And the Day in the firſt Column on the

ROYAL FAMILY, &c.

BIRTH-DAYS of the ROYAL FAMILY.

KING GEORGE III.	June 4, 1738	Prince Aug. Fred.	Jan. 27, 1773
Prince of Wales,	Aug. 12, 1762	Prince Adolph. Fred.	Feb. 24, 1774
Prince Frederick,	Aug. 16, 1763	Princeſs Mary,	April 25, - 1776
Prince Wm. Henry,	Aug. 21, 1765	Princeſs Sophia,	Nov. 3, - 1777
Prs. Cha. Aug. Mat.	Sept. 29, 1766	Princeſs Amelia,	Aug. 7, - 1783
Prince Edward,	Nov. 2, - 1767	Queen Charlotte,	May 19, 1744
Prs. Auguſta Sophia,	Nov. 8, 1768	Prs. Auguſta of Brun.	Aug. 11, 1737
Prs. Elizabeth,	May 22, - 1770	Duke of Glouceſter,	Nov. 25, 1743
Prince Erneſt Auguſtus,	June 5, 1771	Duke of Cumberland,	Nov. 7, 1745

SOVEREIGNS of EUROPE, their Acceſſion, &c.

Kingdoms, &c.	To whom ſubject.	When born.	Began to reign.
England, &c.	George III.	June 4, 1738	Oct. 25, 1760
France	Lewis XVI.	Aug. 23, 1754	May 10, 1774
Ruſſia	Catharine II.	May 2, 1729	July 9, 1762
Spain	Charles III.	Jan. 20, 1716	Aug. 10, 1759
Portugal	Mary	Dec. 7, 1734	Feb. 24, 1777
Pruſſia	Frederic IV.	Sept. 25, 1744	Aug. 17, 1786
Denmark & Norway	Chriſtian VII.	Jan. 29, 1749	Jan. 14, 1766
Sweden	Guſtavus III.	Jan. 24, 1746	Feb. 13, 1771
Germany	Joſeph	Mar. 13, 1741	Aug. 18, 1765
Poland	Staniſlaus III.	Jan. 17, 1732	Nov. 25, 1764
Holland	William V.	March 8, 1748	Oct. 11, 1751
Popedom	Pius VI.	Dec. 27, 1717	Feb. 18, 1775
Sardinia	Victor	June 26, 1726	Mar. 20, 1773
Ottoman Empire	Achmet IV.	Nov. 5, 1719	Jan. 21, 1774

The FULL WEIGHT of the COINS, with the LEAST WEIGHT allowed to paſs of the Gold Coin.

GOLD.	Wt. allowed. dwt.	gr.	Full Wt. dwt.	gr.
Guinea -	5	8	5	$9\frac{30}{89}$
Half Guinea,	2	16	2	$16\frac{60}{89}$
Quarter Guin.	1	8	1	$8\frac{32}{89}$

SILVER.	Full Wt. dwt.	gr.
A Crown, - - - -	19	$8\frac{16}{37}$
Half Crown, - -	9	$16\frac{8}{37}$
Shilling, - - -	3	$20\frac{2}{37}$
Six Pence, - -	1	$22\frac{1}{37}$

According to the above proportions it appears, that the value of a *lb.* o ſilver is 62s. or 3l. 2s. and of a *lb.* of gold is $44\frac{1}{2}$ guineas, or 46l. 14s. 6d Alſo that the *oz.* of ſilver is 5s. 2d. and the *oz.* of gold 3l. 17s. $10\frac{1}{2}$d So that the value of the ſtandard gold is 15 times that of the ſilver, an 14th more.

A TABLE of TERMS and RETURNS for 1789.

Hilary Term begins *January* 23, ends *February* 12.

Michaelmas Term, begins *October* 10 - - - ends *Dec.* 17.
The Act is *July* 13.

CAMBRIDGE TERMS.

Lent Term - - begins *January* 13, - - ends *April* 3.
Eaſter Term - - begins *April* 22, - - - ends *July* 10.
Michaelmas Term begins *October* 10, - - ends *Dec.* 16.
The Commencement will be *July* 7.

January hath XXXI Days.

Big with the Treasures of the North,
Behold the teeming Clouds bring forth;
And Show'rs of soft and fleecy rain
Fall, to new clothe the Earth again.
Sol hides his Face, whilst Heaven scowls,
And o'er the Heath the Tempest howls.

February hath XXVIII Days.

The Mountain Tops behold around,
Appear with Furs of Ermine crown'd;
And lo, descending by degrees,
White mantling hides the naked Trees,
While chilling Cold diffused round,
Turn lympid Streams to solid Ground.

D							14 9	4a19	11a41	Jupiter, who lately was in opposition to Mars, has seemingly laid aside his resentment, or diverted his wrath into another channel. If we have among us a sort of subtle and no less than wicked agents, who are perpetually hatching mischief, and filling the hearts of a credulous people with astonishment, it is no more than I expect. Some person of note is about this time visited either by death, affliction, or sore disgrace. Expect murmurings and possibly some disagreeable news about this time. *Fælix qui potuit rerum cognoscere causas.*

March hath XXXI Days.

But Sol advancing now in height,
Soon makes the Day out balance Night;
While bluſt'ring Winds are iſſu'd forth,
From the cold Regions of the North;
And Winter, as if loth to go,
Retires unwillingly and ſlow.

April hath XXX Days.

The weeping April next appears,
And oft a sable Suit she wears.
The clouded Morn, the sober Eve,
The too-long frozen Earth relieve;
And Swains rejoice, since April Show'rs
Productive are of May's gay Flow'rs.

May hath XXXI Days.

Now Flora, beautiful and gay,
Doth bid all hail to welcome May;
And Meads, and Gardens, trim are seen,
With Flowers deck'd and Herbage green;
The Warblers sweet exert their Voice,
And Birds, and Beasts, and Men rejoice.

JUNE hath xxx Days.

Now to the ſhade we all reſort,
And flee the Sun we late did court;
Or while he darts his flaring beams,
We panting bathe in cooling ſtreams;
And oft at even ſee him ſet
In Thetis lap without regret.

Obſervations.

The good which I would prognoſticate, is letters of advice to our merchants, that their good ſhips are ſeverally arrived in ſafety to their deſtined ports; that their deſtined home-bound lading, is in good order, and great plenty; ſo being undoubtedly reaſonable, is (or ought to be) a bleſſing to the merchant; his buyers, the retailers, their buyers, & more or leſs to the whole community. But alas, things were not always ſo.—Avarice is ſo connected with trade, that it is much eaſier to raiſe a price than to ſink it. What I bought at an advanced price ſavs the trader, I muſt ſell off accordingly, otherwiſe I unavoidably ſink in my fortune; well ſay I, ſell that off, and then lower your price

Behold the ſurly farmer ſtand,
And ſcowling o'er the ſun-burnt land,
Cries all is parch'd in days bright blaze.
But let bright ſol withdraw his rays;
How ſhould things ripe? in language gruff,
Says he; why there's not ſun enough.

August hath xxxi Days.

Yet heav'n's in mercy pleas'd to ſerve,
Mortals with more than they deſerve;
When ſpring with ſoft and gentle fires
Has rais'd each plant, ſhe then retires;
And ſummer oft with cooling rains
Obſtructs ſol's force, and chears the plains.

To wintry age, when all before
That charm'd, ſhall ceaſe, and charm no more,
The palſy'd limb, the frozen vein,
Comes death to eaſe, and cloſe the ſcene:
Then happy all prepar'd to riſe
To realms of joy in brighter ſkies.

Of the ECLIPSES, *and other* PHOENOMENA, *in the Year* 1789.

AT the latter end of the year 1788, or the beginning of the year 1789, a Comet is expected to appear; concerning which nothing certain can be determined at preſent, for want of ſufficient obſervations of the antients, and not correct enough to be relied upon This too might in all probability be owing to their falſe conceptions of the real nature of Comets, which they looked upon as prodigies, and blazing meteors, lighted up in the heavens, as forerunners of ſome notable misfortunes, and ſtrange mutations in this our ſublunary globe; therefore in ancient hiſtory, upon the deſtruction of empires, or the depopulation of cities by plague, peſtilence, or famine, we generally find an account of a blazing Star with a large fiery Tail, which was ſeen in the heavens at or before that time, terrifying every beholder for ſeveral nights ſucceſſively. The diligence however of later Aſtronomers has eſtabliſhed beyond a doubt that they are opake, ſpherical, and ſolid bodies, and perform their periodical revolutions about the Sun in orbits vaſtly elliptical, which have the Sun in one of their *foci*. They differ from the Planets in this: They move in various directions, ſome the ſame way with the Planets, others in contrary directions. And while the planetary motions are confined within the Zodiac, their orbits admit of any inclination whatever; and the excentricity of them is ſo very great, that ſome of them perform the greateſt part of their motion nearly in right lines, tending in their approach to the Sun almoſt directly towards it, and after leaving it flying off in almoſt a right line, till out of the ken of man, and appear as if they were haſtening away to the fixed ſtars. Although at preſent, for want of ſufficient obſervations, not many things can with certainty be ſaid upon either their number, or their periodical returns, yet the learned and Rev. Mr. Rowning has remarked thus: It ſeems probable that the Comet which appeared in the year 1682, was the ſame which was ſeen before in the year 1607, and the year 1531, and has a circuit of about 151 years. And the great Comet which appeared in the year 1680, was the ſame which was ſeen in the time of K. Henry I. in the year 1106, in

531, and in the 44th year before Chriſt, in which Julius Cæſar was murthered. As to the Comet expected, I ſhall only add, that as the Comet of 1531, 1607, and 1682, returned in 1759, there is no doubt but all others will return at their proper periods; and the Comet of 1532 and 1661, being thought to be the ſame, its return is expected at the latter end of 1788, or before April 27, 1789.

As the mention of a Comet ſeldom comes under the notice of an Almanack, whoſe particular buſineſs is only to predict and draw inferences from the phenomena which ſhall happen in the year for which they were calculated, it may not be amiſs to enlarge a little more on this ſubject:

The ancients (as we have before obſerved) being entirely ignorant of their nature, looked upon them as meteors kindled in the air, and portending ſome extraordinary event. As a proof of this a paſſage from Homer is ſufficient.

> As the red Comet from *Saturnius* ſent,
> To fright the nations with a dire portent,
> (A fatal ſign to armies on the plain,
> Or trembling ſailors on the wat'ry main)
> With ſweeping glories glides along in air,
> And ſhakes the ſparkles from his blazing hair.

The moderns however found that they were real bodies, moving in very elliptical orbits, and in various directions and different periods, being at ſome times extremely near the Sun, and at others immenſely diſtant, by reaſon of which they are ſometimes much hotter than Mercury, and at other times much colder than Saturn.

The Comet in 1680 came ſo near the ſun, that it was not a ſixth part of the Sun's diameter diſtant from his ſurface, and his heat then was two thouſand times hotter than red-hot iron; from thence it took its courſe from the Sun to the diſtance of above eleven thouſand millions of miles, which is at leaſt fourteen times further than the orbit of Saturn. The light and heat then of that Comet is therefore near two hundred times leſs than at Saturn, and above ſeventeen thouſand times leſs than with us; and when it was neareſt the Sun, the light and heat thereof was no leſs than twenty-eight thouſand times greater than in our torrid zone.

We

What chiefly attracts the notice of the generality of people is the Tail of a Comet.——The Tails of Comets appear largeſt and moſt ſplendid immediately after their return from the Sun, becauſe they then emit the moſt vapour. Agreeable likewiſe to the nature of vapour and ſmoke, the tail of a Comet lies always towards thoſe parts which the Comet's body leaves in its deſcent. We may farther add, that as vapours, they riſe the more as they expand; ſo the tails of Comets appear broader on their upper part than near the head. Another proof that they conſiſt of a fine pellucid vapour is, that the fixed ſtars are often ſeen thro' the tails of comets. Laſtly, Theſe tails are exceeding long, ſome having been computed to be not leſs than eighteen millions of miles in length.

The conjectures of philoſophers upon their uſes are various. Certain it is that God made nothing in vain, but in vain may we conjecture notwithſtanding.

Some of the firſt rank in the philoſophical world have imagined, that by the rarefaction, and ſpreading of the vapours of the tails of Comets, they ſupply the planets with moiſture, which they ſuppoſe by vegetation and putrefaction, &c. continually decreaſes.

Others ſuppoſe, that Comets, in their ſeveral revolutions, approach nearer and nearer to the Sun, till at laſt dropping into it, they ſupply that great luminary with freſh fuel.

Laſtly, It appears to be the general opinion that they are inſtruments appointed by the Almighty to put a period to the planetary world, whenever his divine will ſhall ſo determine; which may be done either by involving the globe of the Planets in their paſſage towards the Sun in their atmoſphere of water, and thereby drowning them, as it was with this earth in the days of Noah; or elſe, by advancing a little too near in their return from the Sun: This indeed was the caſe of the Comet in the year 1680, when the Comet came ſo near the orbit of the Earth, that had our globe then been in that part of its orbit, we muſt acknowledge that "*The Globe itſelf, with all which it inherited, had diſſolved, and, like the baſeleſs fabric of a viſion, left not a wreck behind.*" But I ſpeak only of what is poſſible, not of what is probable.

Of

Of the ECLIPSES *which will happen in the Year* 1789.

WITHIN the compaſs of the preſent year there will be four Eclipſes, two of the Sun and two of the Moon; but only one of them will be viſible to the inhabitants of this iſle. Theſe will happen in the following order:

The firſt will be a partial, but to us inviſible Eclipſe of the Moon, and will happen on May 9, as follows:

Beginning - 8 h. 38 min.
Middle - - 9 h. 31 min.
End - - 10 h. 24 min. } in the morning.
Duration - 1 h. 46 min.

Digits eclipſed 2° 54′ on the Moon's northern limb.

But although none of this Eclipſe will be viſible to Europeans, in all the weſtern parts of both North and South America it will be viſible. The fore part of this Eclipſe may be ſeen in Eaſt and Weſt Florida, the Havannah and Jamaica; but the whole of this Eclipſe will be ſeen at the Sandwich and Friendly Iſlands, diſcovered by that celebrated circumnavigator Capt. Cook; as alſo in New Zealand, new Holland, the Philippine Iſles, Japan, and Yedſo.

The ſecond Eclipſe will be a ſolar defect, on Sunday, the 24th of May; the conjunction is at 20 minutes and a half paſt 10 at night, therefore will of conſequence be inviſible to the inhabitants of Great Britain. It will however be a central Eclipſe on the meridian at 18 minutes paſt 10, in Longitude 154° 29′ Weſt, and Latitude 11° 14′ South of Greenwich Obſervatory.

The third is a partial and viſible Eclipſe of the Moon, and if the air prove ſerene and favourable, may be ſeen by the inhabitants of this iſle. This Eclipſe will happen as follows:

Beginning Nov. 2, at 11 h. 27 m. night.
Middle - Nov. 3, at 0 h. 32 m. morn.
End - Nov. 3, at 1 h. 36 m. morn.
Duration - - - 2 h. 9 m.
Digits eclipſed 3 deg. 40 m. on the Moon's ſouthern limb. See the type in the margin.

This Eclipſe will be viſible to all the inhabitants and ſtates in Europe and Africa, together with the weſtern parts of Aſia, and the eaſtern parts of America. But in Siam, China,

China, Chineſe Tartary, &c. in the eaſtern parts of Aſia, the fore part only will be viſible.

The fourth and laſt is an inviſible Eclipſe of the Sun, which will happen on Tueſday, Nov. 17, at 29 minutes paſt 3 in the morning.

This Eclipſe, although inviſible to all Europe, will be viſible in China, and the eaſtern parts of Great Tartary in Aſia; likewiſe to the Iſland of Japan and Yedſo. The Sun moreover will be centrally eclipſed on the meridian at 22 minutes paſt 3, in Long. 129° 31′ Eaſt, and Lat. 14° 45′ North of Greenwich Obſervatory.

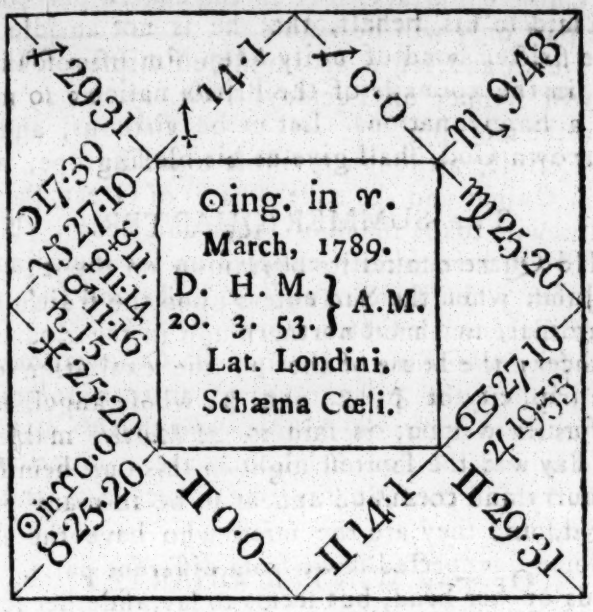
Thus I conclude my Aſtronomical Obſervations upon the Eclipſes of the preſent year; as to aſtrological remarks, as there is but one viſible, and that to us a partial one, and in which all our neighbours are as much concerned as we, I think them at this time unneceſſary, and haſten to the Seaſons.

OF THE WINTER QUARTER.

THIS Quarter commences the 21ſt day of Dec. 1788, at 2h. 14m. mane, when the bright Charioteer of Heaven firſt touches upon the cold, cardinal, and melancholy ſign of Capricorn, the houſe of ♄ and exaltation of ♂, and the triplicity of ♀ and ☽, and whoſe angel, according to the Arabian Aſtrologers, is *Hunuel*. Now has the Sun reached his utmoſt ſouthern limits, ſhort are his viſits, and then, when veiled in a wintry cloud, even day itſelf ſeems benighted. This ſeaſon is well pictured by *Horace*. *Lib.* I. *Ode* 9

"Behold yon mountain's hoary height,
"Made higher with new mounts of ſnow;
"Again behold the Winter's weight
"Oppreſs the lab'ring woods below;
"And ſtreams with icy fetters bound,
"Benumb'd, and cramp'd to ſolid ground."

I imagine there will be much conſultation in the cloſets of princes; and the ſenators of every nation are contriving work for the more active part of the year. It is uſhered in with a diſagreeable aſpect, which is followed by no leſs than three more, all as it were in the entrance of the year of a malign nature. It is certainly a very active ingreſs, and apparently inclined to acts of violence.



OF THE SPRING QUARTER.

THIS Quarter begins on March 20, when the Sun enters upon the firſt ſcruple of the maſculine, diurnal, equinoctial, and cardinal ſign of Aries, the day houſe of ♂, the exaltation of the ☉, and the triplicity of ☉ and ♃, whoſe angel is ſaid by ancient writers to be *Muſchdiel*.

Sol, now mounting up the northern hemiſphere maketh equal day and night, introducing the welcome Spring

We have, according to our uſual cuſtom given a Scheme of the Heavens as they appear to the eye of the aſtrologer at Sol's firſt ingreſs. We find the quarter is uſhered in with no leſs than five Conjunctions and two trines, *viz.* ☌♂♀, ☌♂☿, ☌♀☿, ☌♄♀, ☌♄♂, △♃♀, △♃♂, all favourable Aſpects. You moreover perceive that in the above ſcheme Sagittary is upon the Medium Cœli, and 27° 10′ of Capricorn is on the aſcendant; the Planets, excepting the Moon, are all under the Earth. We may expect much negociation. We would do well to hope and endeavour that all ſhall be of the pacific kind; we at the ſame time ſhall do well to be upon our guard, that we be not deceived by the pretenſions of falſe friends. Fraud and guile will keep footing ſo long as the world endures; for as many ill properties as the devil hath, this

may

may be ſaid in his behalf, that he is not an idle devil; may the ſtricteſt bond of unity keep him from ſowing diſſention in the councils of the Britiſh nation; ſo may we yet be a happy nation. Let us be virtuous, and God, even our own God, ſhall give us his bleſſing.

THE SUMMER QUARTER.

THIS Quarter takes its beginning on the 21ſt day of June, when the Sun enters upon the fruitful, ſoſtilial, cardinal, and moſt northern ſign in the Zodiac, the ſign Cancer; the houſe of the ☽, the exaltation of ♃, and the triplicity of ♂, ♀, and ☽, whoſe angel, according to former writers, is ſaid to be *Muriel*, making the longeſt day and the ſhorteſt night in this our hemiſphere. Much hurry and confuſion appear to be in many parts of the world, and they are the ſafeſt who have the leaſt to loſe. Some unexpected news from different parts. Rome ſtill holds up her head, but ſeems to lay aſide her ſcourge. There is an event to which all things are operating, but the manner of bringing it about is hid from human ken. I therefore haſten to

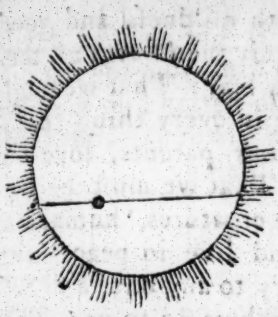
THE AUTUMNAL QUARTER.

THIS Quarter commences upon the Sun's entering upon the equinoctial, diurnal, weſtern, and cardinal ſign Libra, whoſe angel is ſaid to be *Zuriel*. This will happen this year on the 22d day of September, at 3h. 8m. P. M. I here muſt cloſe my account of this preſent year, with obſerving that, in my opinion, it will be productive of great mutations; theſe however will all operate to one great end, but growing years will of this give a further inſight.

I cannot conclude without informing the curious, that on the 5th day of November there will be a remarkable tranſit of the Planet Mercury over the Sun's diſc. This will be viſible in England till ſun-ſet, and the latter part will be ſeen at the Cape Verd and Canary Iſles, the Azores, Iceland, Greenland, and to the North and North-weſt, as far as Baffin's Bay.

The following calculation is from accurate tables:

Beginning



Beginning	1h 10m	P. M	Mercuries
Lat. 9′ 20″ South.			
Ecliptic Conjunction	3h 30m.		8′ 16″
Mid. of the Tranſit	3 37		7′ 17″
Sun ſets	4 39		
End	6 4		5′ 15″

I conclude my predictions for this year with praying the Divine Being to avert all heavy calamities from this our iſle, and whatever diſturbances may be abroad, may we be bleſſed with peace and unity at home, and approve ourſelves the loyal ſubjects of the beſt of Kings, whom God defend and preſerve. Amen.

IT having, in this age of diviſion in ſentiments relating to religious worſhip, been enquired what was the doctrine of the primitive Chriſtians, with reſpect to faith and duty, as taught in the ſacred Scriptures? we ſhall here give the following abridgement of the ſame in the words of *Pollio*, a Chriſtian martyr, who died for the truth of his holy profeſſion, A. D. 304.

This *Pollio*, being a reader in the church of Cibales in Pannonia, was accuſed before Governor *Probus* of having derided the gods of wood and ſtone which the Heathens adored.—This man, being brought before the Judge, manfully confeſſed himſelf to be a Chriſtian, and one of thoſe who, in ſpite of tortures, would perſiſt in his fidelity to the Eternal King; and in obedience to the divine commands of the word of truth, as given by his Lord and Saviour Jeſus Chriſt.

Probus upon this demanded to know what thoſe commands were? To which *Pollio* thus replied:

"Theſe commands (ſaid he) are they which teach us that there is but one God in Heaven. That images made of wood and ſtone cannot be called gods, nor be any way propitious to men. By theſe commands we muſt correct our faults by repentance, and perſevere inviolably in the good we have embraced. That virgins, who maintain their purity, are advanced to a high rank: That married women ought to preſerve their conjugal chaſtity, and attend to the education of their children: That maſters

ought

ought to rule over their ſervants with mildneſs and good-nature: That ſervants ought to acquit themſelves of their duty rather from motives of love than fear: That we ought to be obedient to the civil power in every thing that is juſt: That we ought to reverence our parents, love our friends, and forgive our enemies: That we muſt be tender and affectionate to all our fellow creatures, humane to ſtrangers, charitable to the poor, and live in peace with all men: That we muſt do no injury to any one, and ſuffer with patience the wrongs which others do to us: That we muſt beſtow our goods with liberality, and not covet thoſe of others: And that he ſhall live eternally who, in defence of his faith, deſpiſes a momentary death, which (ſays he) is the utmoſt puniſhment you can inflict."

Notwithſtanding (ſays my author) this noble confeſſion, replete as it is with pure and heavenly ſentiments, the Governor *Probus* ordered *Pollio* to be chained to a ſtake and burned to death.

Such was the faith, and ſuch the character, of the Chriſtians in former ages; and that it was a juſt one will appear from the ſentiments of one of the greateſt philoſophers and wiſeſt Emperors that ever governed Rome, wherein you will ſee a vindication of the Chriſtians pronounced from the mouth of a Heathen; this was a letter written in the year of Chriſt 152, by the Emperor Antoninus to the ſtates in Aſia, who had accuſed the Chriſtians of being the cauſe of ſeveral earthquakes which had happened in that part of the globe.

In this he adviſed the Governors to take great care, leſt in puniſhing the Chriſtians they ſhould make them more obſtinate than before, inſtead of changing their opinions; ſince their religion taught them to ſuffer with pleaſure and reſignation for the ſake of their God. As for the earthquakes which had happened, he told them, that they themſelves were always diſcouraged, and ſunk under ſuch misfortunes; whereas the Chriſtians never diſcovered more chearfulneſs and confidence than upon ſuch occaſions. He concluded with telling them, that he would not have the Chriſtians injured; for although they did not worſhip the gods of the Empire, yet they had a God of their own, and that they were a peaceable and inoffenſive people.

FINIS.
